

Akshay Gaikwad

Location: Pune, India | **Phone:** +91-9762811807 | **Email:** gaikwad.akshay79@gmail.com

Portfolio: agbuilds.online | **GitHub:** github.com/gaikwadakshay79 | **LinkedIn:** linkedin.com/in/ag9762811807

Professional Summary

Senior Backend / Full Stack Engineer (7.5+ yrs) building scalable distributed systems using Python (FastAPI, Django), Golang and PostgreSQL. Experienced in high-throughput platforms, event-driven architectures, async processing systems and real-time hardware integrations across SaaS, agritech commerce and defense engineering domains. Strong focus on performance optimization, reliability and end-to-end system ownership.

Technical Skills

Languages: Python, Golang, TypeScript, JavaScript

Backend: FastAPI, Django, Node.js, REST APIs, Microservices

Async Systems: Celery, Redis, RabbitMQ, Kafka

Databases: PostgreSQL (Query Optimization, Indexing), MySQL, Redis, DynamoDB

Frontend: React, State Management, Performance Optimization

Infrastructure: AWS (EC2, S3, Lambda), Docker, Nginx, CI/CD

Practices: System Design, Distributed Systems, Observability, Agile

Work Experience

Netlink Software Pvt Ltd

Aug 2024 – Present

Senior Software Engineer | Client: ZS Associates

Pune

- Acted as technical lead for a 4–6 engineer team, driving architecture decisions, stakeholder alignment, and production delivery for enterprise analytics dashboards.
- Architected a snapshot-based historical data engine supporting 200+ metrics across 10+ pages with unified Year/Quarter/Month schemas for consistent payloads.
- Built a full-stack configuration module with Python/Flask and PostgreSQL, enabling business users to edit previously read-only ETL metrics from the UI.
- Implemented pessimistic locking with configurable TTL and active-editor visibility to prevent concurrent edit conflicts in high-traffic workflows.
- Institutionalized pair programming, KT sessions, and automated frontend testing, reaching 60% coverage and reducing permission-related production incidents.

Aituring Technologies Pvt Ltd

May 2024 – July 2024

Head of Software | Freelancing

Pune

- Led a 5-engineer cross-functional team to build Remote Controlled Weapon Station (RCWS) software from scratch for a defense-tech product.
- Architected a hybrid Python/Go backend for low-latency serial communication with microcontrollers, including a custom Go communicator using PyModbus.
- Engineered control logic for 0.1° micro-increment pan/tilt precision, translating sensor inputs into highly stable hardware movements.
- Spearheaded GPU-accelerated target acquisition and object tracking using real-time camera feeds for autonomous target identification.
- Implemented ballistic and sensor-fusion pipelines combining LRF, wind, and trajectory data to compute real-time aiming corrections.

AgroStar (Ulink Agritech Pvt Ltd)

June 2022 – May 2024

Full Stack Developer (SDE-2)

Pune

- Owned end-to-end delivery across CrmService, CartService, NotificationService, TicketService, Crm-UI, and Offer-UI for a revenue-critical sales platform.
- Maintained infrastructure supporting 25k–40k daily voice interactions and 50k–100k daily orders, driving 15M–40M INR in daily revenue.
- Re-architected backend services by merging multiple services, while standardizing S3 handling through shared utilities to reduce duplication.

- Designed a Kafka-driven asynchronous Partner Club assignment engine with 5-tier business logic based on purchase and payment behavior.
- Eliminated recurring support portal outages by fixing legacy Django query bottlenecks with mock pagination and indexed email matching.
- Improved rollout performance by building Catalog and Cart aggregator layers, and reduced frontend deployment time from 20 minutes to under 1 minute via CI/CD.
- Received three consecutive quarterly awards as a 7-Star Performer / Impact Creator for high-impact delivery and technical mentorship.

Alchemic Solutions

Oct 2021 – May 2022

Full Stack Developer | Client: CloudFountain

Remote

- Architected a dynamic rule-based insurance recommendation engine with Node.js and React/Redux to drive conditional questionnaire and plan selection flows.
- Designed anonymous-to-authenticated session mapping so guest recommendation history merged cleanly into user profiles after login without data loss.
- Integrated ML feedback into provider filtering, improving successful policy issuance by 20% for targeted user segments.
- Implemented robust server-side and Redux-based state persistence to support complex insurance comparisons and high-frequency session updates.
- Built user activity tracking, referral workflows, and manual fallback buddy-assignment flows to improve funnel insight and ensure 100% lead coverage.

RouteRabbit (Vantage Systech Pvt Ltd)

July 2018 – Sept 2021

Backend Developer | Client: QMocha

Pune

- Re-engineered a cron-based monolith into distributed Node.js/Python/Celery microservices, cutting processing time by 90% from 30 minutes for 100 posts to about 5 minutes for 400+ posts.
- Designed a multi-stage Celery/Redis/RabbitMQ orchestration pipeline with a RootService to chunk large social-media workloads and manage shared PostgreSQL state transitions.
- Built dynamic EC2-based autoscaling for AiService workers using queue-depth signals to scale compute up and down on demand.
- Implemented granular progress tracking at post, fetch, and profile levels to preserve consistency and provide real-time status updates in the UI.
- Delivered the core social intelligence product by ingesting Facebook/Instagram Graph API data, generating predictive posting insights, and contributing across Python, Node.js, React, and Angular JS.

Open Source & Products

Django Role Based Masking (PyPI)

2026

Open Source Author

- Published a Django REST Framework package that masks serializer output fields based on the requesting user's role.
- Designed configurable masking strategies so teams can protect sensitive fields in APIs and admin workflows without duplicating authorization logic.
- Built the package as a reusable privacy/control layer for multi-role products where field visibility must change by user access level.
- PyPI: pypi.org/project/django-role-based-masking/

Light Async Queue (NPM)

2026

Open Source Author

- Built a production-ready, Redis-free async job queue for Node.js with TypeScript, designed for reliable single-node background processing.
- Implemented file-based persistence, worker process isolation, crash recovery, retries, exponential backoff, and dead-letter queue support.
- Focused the design on lightweight deployment and operational simplicity for teams that need durable job processing without external queue infrastructure.
- NPM: npmjs.com/package/light-async-queue/

Education

University of Pune

2014 – 2018

Bachelor of Engineering in Computer Science | First Class With Distinction

Pune
